Objective

Mechatronics Engineer interested in Automation and AI track, seeking to leverage hands-on experience in PLC systems, machine learning, and mechanical design to contribute to innovative engineering solutions. Eager to apply multidisciplinary knowledge gained through industry internships and practical training in control systems, Python development, and Azure-based AI model deployment.

Experience

Abu Qir Engineering Industries Company

13 July 2025 – 24 July 2025

Mechatronics Engineer Internship

Abu Qir, Alexandria - Egypt

- Understand the fundamentals of PLC programming and control systems, with hands-on experience monitoring and maintaining production lines for pyresol sprayers in workshop environments.
- Responsible for identifying system defects, troubleshooting issues in real-time, and generating technical reports to improve manufacturing efficiency.

DEPI - Digital Egypt Pioneers Initiative

29 June2025 – 2 December 2026

Ai & Machine Learning Engineer internship

Online internship

- with hands-on experience in Python, ML, deep learning, NLP, computer vision, and MLOps using Microsoft Azure.
- Completed practical projects involving data preprocessing, visualization, model deployment, and an end-to-end capstone project on Azure.

MCV- Manufacturing commercial vehicles

3 August 2025 – 14 August2025

Service Engineer internship

Amerya 1, Alexandria - Egypt

- Assisted in supervising and optimizing maintenance workflows within the aftersales workshop, including job scheduling and technician coordination.
- Conducted vehicle diagnostics, documented fault reports, and supported communication between customers and technical teams for complex repair issues.
- Participated in managing spare parts inventory, technician development, and warranty-related processes to ensure efficient and high-quality service delivery.
-

Education

Bachelor of Engineering (B.E.) - Mechatronics Engineering

Sep 2023 – Present

Faculty of Engineering, Egypt-Japan University of Science and Technology

Borg Al-Arab, Alexandria-Egypt

- CGPA: 3.29

Courses

- Python data fundamentals – Data Camp
- Engine Internal Combustion – Udemy
- Mechanical Design Basics – Udemy
- PMP Basics – Simplilearn
- PCB Design Basics - Udemy

Skills

- Programming Languages:** Python, C++, PLC, MATLAB,
- Design programs:** SolidWorks, Altium, AutoCAD, SCADA software, Proteus, GAZEBO, MATLAB/Simulink
- Concepts and Fundamentals:** Workshop Safety Standards, process control, control systems, Automation and Robotics, electromechanical engineering, Systems Management, Troubleshooting, mechanical engineering, ROS (Robot Operating System), Sensors & Actuators integration, Arduino / Raspberry Pi programming, Real-time systems and signal processing, process management,
- Framework & Libraries:** TensorFlow, PyTorch, OpenCV, Matplotlib & Seaborn, Scikit-learn, Pandas & NumPy, Data preprocessing & feature engineering
- Languages:** Arabic (Mother Tongue), English, German, French, Japanese
- Soft Skills:** Problem solving, attention to detail, Teamwork, negotiation skills, flexibility, emotional intelligence, communication skills, analytical thinking, provide guidance, self-motivation, Project Planning, Time Management, organized

Projects

Hexapod Moving Robot | University's Course Project

April 2025

- Designed and analyzed a hexapod walking robot using mechanical linkages for efficient, synchronized motion.
- Implemented a 1 DOF planar linkage mechanism inspired by Theo Jansen's design to reduce control complexity.
- Developed two motor configurations: single-crankshaft drive and dual-motor system for independent leg control.
